SUMMARY

Junior QA/SQA Engineer with hands-on testing experience gained by building and testing a live, self-developed ML application. Skilled in manual testing, API testing (Postman), SQL, and Playwright/TypeScript automation, with a strong foundation in ISTQB testing fundamentals.

SKILLS

Testing: ISTQB fundamentals, manual testing, test case design

Automation: Playwright, TypeScript

Tools: Postman (API testing), Git, SQL

PROJECTS

CyberSentinel AI — ML-based phishing, malicious URL, and malware detection platform (live, self-built)

- Conducted structured manual testing of the URL-scanning module and identified a real input-validation defect where non-URL text was silently processed as a scannable URL — logged and documented following a formal defect lifecycle.
- Built and trained a phishing-email classifier using TF-IDF feature extraction and Logistic Regression, achieving 98.73% accuracy (95% precision/recall/F1) on a 1,024-email test set.
- Designed and implemented a 10-feature rule-based URL risk-scoring engine (IP-as-domain detection, spoofing symbols, suspicious keywords, TLS/TLD checks) integrated with the AbuseIPDB threat-intelligence API for real-time reputation scoring.
- Built a malware-scanning module that hashes uploaded files (SHA-256) and checks them against 70+ antivirus engines via the VirusTotal API, deleting files immediately after hashing to preserve user privacy by design.

QA Engineering Portfolio — github.com/mohaviaarif/qa-engineering-portfolio

- Maintaining a dated QA portfolio containing original test cases, bug reports, and testing documentation, developed through a structured 90-day practice program.

EDUCATION

Bachelor of Science, Computer Science — COMSATS University Islamabad, Abbottabad Campus

Graduated August 2026 | CGPA: 3.06
